

756. 6 18
Vox Stellarum: 3
p. 2465
OR, A LOYAL
ALMANACK
For the Year of HUMAN REDEMPTION,
M DCC LXXXII.

BEING
The Second after BISSEXTILE or LEAP-YEAR.

IN WHICH ARE CONTAINED
All THINGS fitting for such a WORK; as,
A TABLE of Terms and their Returns;
The Full, Changes, and Quarters, of the MOON;
The Rising, Southing, and Setting of the SEVEN STARS,
and other Fixed Stars of Note; the MOON'S Age, and
A TIDE TABLE fitted to the same:

The Rising and Setting of the Sun; the Rising, Southing,
and Setting, of the Moon; Mutual Aspects, Monthly Ob-
servations; and many other Things, useful and profitable.

UNTO WHICH ARE ADDED,
Astrological Observations on the Four Quarters of the Year;
An HIEROGLYPHIC, alluding to these present Times;
A remarkable CHRONOLOGY; the ECLIPSES;
And other MATTERS, both curious and profitable.
With a particular Judgement of a visible Solar Eclipse,
and many other Things relating to Astrology.

By FRANCIS MOORE, Physician.

L O N D O N,

Printed for the Company of STATIONERS, 1782.

And Sold by JOHN WILKIE, at their Hall in
LUDGATE-STREET. [Price Nine Pence, stitched.]

Ephemerides. &c.

A plain and easy TABLE, shewing the Time of HIGH WATER.

Note, That the Moon's Age being taken notice of in the TABLE, you have the Time of HIGH-WATER at all the under-named Places.

	1000	4 3 4	8 6 8	12 10 0	25 0 0	37 10 0	50 0 0

If you would know the Interest of One Hundred Pounds for one Month, two Months, three Months, six Months, nine Months, or one Year, look for 100l. in the Side; and in the next Column, under 1 Month, is 8s. 4d.; for 2 Months 16s. 8d.; for 3 Months 1l. 5s.; for 6 Months 2l. 10s.; for 9 Months 3l. 15s.; and for a Year 5l.; and so of the rest.

This is the honest Way by which Men should

To Interest let their Silver and their Gold;

Yet worldly Misers, when to Raking fall,

They with their Interest get the Devil and all.

LAW TERMS, &c.

5

A TABLE of Terms and Returns for the Year 1782.

Hilary Term begins Jan. 23, ends Feb. 12.

Returns or Effoign Days.		Exc.	Ret.	Ap.	W. D
In eight Days of St. Hilary	Jan. 20	21	22	23	Wedn.
From the Day of St. Hilary in 15 Days	27	28	29	30	Wedn.
On the Morrow of the Purif. of Bl. V.M. Feb.	3	4	5	6	Wedn.
In eight Days of the Purif. of the Bl. V.M.	9	10	11	12	Tuesday

Easter Term begins April 17, ends May 13.

From the Day of Easter in 15 Days	April 14	15	16	17	Wednesday.
From the Day of Easter in 3 Weeks	21	22	23	24	Wednesday.
From the Day of Easter in 1 Month	28	29	30	31	Wednesday.
From the Day of Easter in 5 Weeks	May 5	6	7	8	Wednesday.
On the Morrow of the Ascension	10	11	12	13	Monday

Trinity Term begins May 27, ends June 19.

On the Morrow of the Holy Trinity	May 27	28	29	31	Friday
In eight Days of the Holy Trinity	June 2	3	4	5	Wednesday.
From the Day of the H. Tr. in 15 D.	9	10	11	12	Wednesday.
From the Day of the H. Tr. in 3 Weeks	16	17	18	19	Wednesday.

Michaelmas Term begins Nov. 6, ends Nov. 28.

On the Morrow of All Souls	Nov. 3	4	5	6	Wednesday.
On the Morrow of St. Martin	12	13	14	15	Friday
In eight Days of St. Martin	18	19	20	21	Thursday
From the Day of St. Martin in 15 Days	25	26	27	28	Thursday

N. B. No Sittings in Westminster-Hall on Ascension-day, Midsummer-day, and the Second of February.

The Exchequer opens eight Days before any Term begins, except Trinity, before which it opens but four Days.

Note, The first and last Days of every Term are the first and last Days of Appearance.

Common Names for the Year 1782.

Golden Number	20	Quinquagesima Sunday	Feb. 11
Cycle of the Sun	23	Easter-Day	March 31
Dominical Letter	F	Ascension Sunday	May 5
Epact	20	Ascension-Day	May 9
Sundays after Epiphany	2	Whit Sunday	May 16
Number of Direction	10	Sundays after Trinity	May 26
Septuagesima Sunday	Jan. 2	Advent Sunday	Dec. 1

Something touching the Foundation, Vindication and Limitation of that most heavenly and sublime Science **ASTROLOGY**, continued from my two last Almanacks.

HAVING in some Measure made it appear. that the Stars are both Signs and Causes of Sub-lunary Mutations and Changes, I come next to shew after what Manner, and by what Means, we attain to the Knowledge thereof.

It was not in so short a Time as one, two, or three Centuries of Years, that Man attained to so perfect a Knowledge in this Divine Art, as to foresee Wars, Peace, Plenty, Scarcity, &c. but by the diligent Observations of many Ages, comparing the Events of one Century with those of another, and both with the then impending Configurations of the Celestial Harbingers, was found out the natural Disposition of each Planet and Sign; by a long Series of Observation, I say, it was, that the World discovered *this* Planet to be the Propagation of Cold and Drought, *that* Heat and Moisture, a *third* Hot and Burning, *this* of an equal Temperament, *that* encreasing Moisture, whilst *another* is convertible to either; and all these active Qualities augmented or diminished in this or that Part of Heaven with this or that fixed Star or Constellation. Thus having discovered the natural Quality of each Planet and Sign by the Accidents, Mutations, and Charges, of the World, Temperaments and Habits of Men; and having by *Astronomical* Observations found out the just Period of each Planet's Revolution through the *Zodiack*; being thereby enabled to behold, as it were at a Distance, the positions of the Planets, and how configured; that is to say, in what Part of the *Zodiack*; and with what remarkable fixed Star, each Planet would be placed at the end of a Month, Year, or what Distance of Time any Person was pleased to appoint; as also in what Part of Heaven each Planet would be located, whether in the East or West, above the Earth or under it, and with what Aspect they would at any such Time behold each other; also what Hour of the Day they would Rise, Culminate, or Set: Being, I say, qualified to discover these and the like Particulars; they then found it no hard Matter to attain to a Foreknowledge of the several Accidents which at that Time would, in all probability, shew themselves. For that Man, that by the Accident can discover the Cause before unknown, may with much more ease discover the Accident by the known Cause, and this and no other is the Ground from which all the true Sons of *Urania* deduce their rational Predictions; these are the Practices which so many exclaim against as Sorcery and Witchcraft; these are the judg-

ling Cheats so much exploded by those very Persons who at the same Time do not stick to practise the like Prognosticks; For who of all these our Condemners, seeing a Person of a slow awkward Pace, with a dark, cloudy, morose Aspect, doth not condemn him for a surly, ill-natured, covetous Fellow? Again, one of a brisk, lively Countenance, they stick not to commend for one of a civil Behaviour, a lover of his Friend, true and trusty, and the like. But should an *Astrologer*, by the Nativities of these Persons, discovering the first to be governed by *Saturn*, the other by *Jupiter*, pronounce these or the like Words, knowing these to be the Properties of the two last-mentioned Planets, *Saturn* and *Jupiter*; straight they cry out he is a Witch, a Sorcerer, and the like; or perhaps those which have not so much of the rage of *Mars*, and the envy of *Saturn*, found in them, may in milder Terms tell you, he speaks by guess, &c. and though he hit right, it was not through any Knowledge he had more than others, but by Chance, &c. for, say they, it would be very strange, if they that are always guessing should never hit right. To these last, I shall say no more than this, that I guess, that when they have experienced the Art as much as I have, they will be of another Mind. And to the first Set I shall propose this Question, whether it be not as lawful to say, that *Saturn* is the Author or Promoter of Melancholy, as that Melancholy-Men are envious, &c. For when we, speaking of public Transactions, pronounce Wars, Peace, Scarcity, Plenty, &c. &c. or if speaking of the Accidents peculiar to particular private Persons, we promise Health, Prosperity, Vexations, Trouble, Sicknes, or any other Accident, we speak not by Aims-ace, as some term it; but, perceiving by the aforementioned natural Causes the Seasons then impending to be subject to extensive Heat, inclining Men to Choler; or, on the contrary, when to an equal Intemperize, &c. we pronounce such or such Accidents to ensue.

[To be continued in my next.]

JANUARY XXXI days.

Late years have been with discontents and jars,
 All the Cœlestials have nothing spoke but wars.
 If God designs, who is't that dare gain-say?
 If he commands, who dares to disobey?
 Yet he is sometimes pleas'd to try and prove,
 The hearts of men by suffering and by love.

Exurgat Deus, &c. Let God arise, and let England's enemies be scattered.
 The year begins with strange diversity

Last quarter 6 day at 11 at night

of news, and many contradictory accounts of the state of public affairs. The influence of the heavens may about this time occasion some uneasiness in the minds of most men. And the

New & 13 day at 7 at night

Merchants may receive loss by bad weather.

Some good and laudable counsels betrayed, and the designs thereof frustrated, by treacherous and evil-designing men. This has too often been the case of late.

First quart. 21 day at 1 aftern.

The aspects in the following month are of a benevolent ray, and tend to the composing of differences, and bringing matters to a fairer light; I wish it may turn out for the good of the English nation.

Full & 29 day at 9 morn.

IO FEBRUARY XXVIII days.

Sure God himself design'd this month to be
A fore-runner of peace and true felicity:
For all the starry bodies now combine
To act a part in this same good design.
But he that peace would have, and power to boot,
Must put his heart, as well as hands, unt't.

25	6 42	5 18	10 26	
26	6 40	5 20	11 19	
27	6 38	5 22	morn.	
28	6 36	5 24	0 10	

VENUS is an evening star till March 20, and then a morning star for the rest of the year.

All things do from the seeds of Nature flow,
 As storms and airy meteors, war and peace,
 And lie reserv'd, till the great God says go,
 Denounce to man this war, or that disease;
 Great changes come, and changes will ensue,
 Till these corrupted bodies change for new.

Last quarter 2 day, at 9 night.

This Month is ushered in with scurrilous
 and lying Aspersions, vilifying and affronting
 some Person or Persons in Holy Orders.

Bad News arrives from Sea; and towards
 the End of the Month, a grave Senator suffers
 by Death or Frowns.

New ☾ 11 day, at 1 morn.

*When giddy Mortals do in Tumults crowd,
 Mad are their Motions, and their Tongues are
 loud:*

*Their Fright to no Persuasions will give ear,
 There's a deaf Madneſs in a People's Fear.*

First quarter 18 day, at 5 aftern.

Much News from divers Parts of Europe, east-
 ward, and southward, and westward too, is
 now handed about. A Discovery of some in-
 tricate Villainy against the State and Govern-

Full ☾ 25 day, at 8 morn.

ment; and some *Clergyman* of the higher Form
 in civil Circumstances. Pray what makes all
 this whispering in London? Let discontented
 Spirits be quiet.

The ruffling Rays of the Malifick-Stars
 In the Months past, give bloody Action now ;
 This gives such News as doth attend the Wars,
 And the Season too, doth it allow.
 Blood craves for Blood, these Villainies beget ;
 Perhaps our Enemies may pay for it yet.

Last quarter 2 day, at noon.

This will be a very busy Month; and Designs of great Importance are acted.

Great Things are promised in foreign Parts, and such too that many Years before have not produced. We find the World is a Lottery, and that a Man may be made or undone in a

New D 10 day, at 3 aftern.

Moment. Now all People are in great Expectation of some novel Things shortly to break out; and we have plenty of Intelligence from all Parts of Europe.

First quarter 17 day, at 11 night.

The Labour of these present Times are great, and must be performed by many Hands. Many notable Things are upon the Carpet in most Nations of Europe; and various Reports from

Full D 24 day, at 3 aftern.

France, Spain, and Germany, as also from the North, of something suddenly to be done.

The Fields and Meads with Store of Grasse are laid,
 And lofty Trees befriended us with their Shade.
 Delicious Fruit each Plant and Tree doth yield,
 Whilst stately Crops of Corn doth crown the Field;
 All kind of Plenty Nature doth bestow,
 That we vain Mortals may more wealthy grow.

Last quarter 1 day, at 4 morn.

Now, 'tis probable, an *Ambassador* or *Agent* arrives about this Time, to agitate Matters of great Consequence, now under Consideration; and to promote something very material.

The *French Monarch* is still active, and very formidable, all Things considered; and yet we

New D 9 day, at 3 morn.

have good Reason to hope the Affairs of *England* are not so bad as some People would make us believe, but still continue in a moderate good Posture, notwithstanding the evil Endeavours to the contrary; and about this Time good News arrives to some of our *Merchants*.

First quarter 16 day, at 4 morn.

Full D 23 day, at 1 morn.

Spain and some Parts of *Italy* in strange Confusion; and I much fear the *Twin City* will not escape from Sickness and Disorders.

Last quarter 30 day, at 10 night.

24 SEPTEMBER XXX Days.

By various Rays, the Stars send forth their Powers,
As by the Crowds of Aspects, here we see,
And do their Duties ; could we but do ours,
Less were our Crimes, less would our Difference be.
Hermes in hurry here, runs to and fro ;
Hence doth that Motion, mighty Councils shew.

Here's mighty Jove to Chronos tiding brings,
 Of some great Thing that's been perform'd by War,
 Against th' perfidious French and Spanish Kings,
 Under a glorious and propitious Star.
 The two Superiors seem to give help in Hand;
 I wish it be for Peace to this our guilty Land.

TABLE of some principal fixed Stars, with the Time they rise, South and Set, either before or after the Seven Stars; as also their Colour, Magnitude, and Meridian Altitude, by which they may be readily discovered.

Co- lour	Alt.	Mag	Names of the Stars	Rise h m	South h m	Sets h m
♂	53	1	Aldebaran, or Bull's Eye	1a 34	0a 48	0b 0
♂	29	1	Left Foot of Orion	4 31	1 31	1 34
♂	30	2	Middle * in Orion's Belt	4 13	1 51	0 35
♂	45	1	Right Shoulder of Orion	3 23	2 8	0 8
♂	21	1	Syrius, the great Dog	6 41	3 1	0 48
♂	43	2	Procyon, the little Dog	5 33	3 53	2a 7
♂	30	1	Heart of Hydra	8 39	5 41	2 44
♂	51	1	Regulus, Lion's Heart	7 26	6 21	5 16
♂	54	1	The Lion's Tail, Denab	8 42	7 54	7 7
♂	28	1	Virgin's Spike	12 46	9 38	6 36
♂	58	1	Arcturus	10 47	10 30	10 12
♂	12	1	Antares, the Scorp. Heart	17 36	12 39	7 42
♂	46	2	Bright * of the Vulture	17 38	16 3	9b 27
♂	6	1	Fomelhaut	11 14	19 11	10 37
♂	56	2	Head of Andromeda	10 42	10 10	2 56

THE brightest of the seven stars is of the third magnitude, and hath 61 degrees of meridian altitude, and in colour participates of the ♀ and ♂.

The fixed stars all rise, South, and set about four minutes sooner every night than they did the night before; this considered, the exact time of rising, southing, and setting for any intermediate night, not herein noted, may be very easily deduced from these tables, by inspection only.

To know the time of rising, southing, and setting of any star in this table, for any day required, it is but considering how many hours and minutes that star rises, souths, or sets, either before or after the seven stars on that day, and you will have your desire; observing that in this table, a stands for after, and b for before.

A Table shewing the Bearing, Distance, Longest Day, and Difference of Meridians of most of the principal Cities in the World, from the famous City of L O N D O N.

*Of the ECLIPSES of the two great Luminaries
for the Year 1782.*

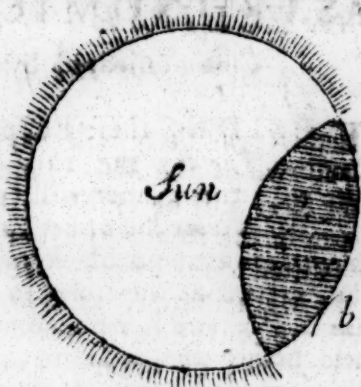

IN this year there will happen two Eclipses of the *Sun*, and two of the *Moon*; and only part of one (and that is of the *Sun*) will be visible in these parts of the world; they happen in the following order, as they were calculated, and transmitted to me by my friend, Mr. H. ANDREWS, teacher of the Mathematics, at *Royston*, in *Hertfordshire*, with whom youth are conveniently boarded, and taught, and made fit for business; or otherwise, as navigation, astronomy, the use of the globes, &c.

The first of these Eclipses is an invisible one of the *Moon*, upon *Friday* the 29th of *March*, about our eight o'clock in the morning. At the time of the greatest defect (which will be near 8 digits) the *Moon* will be vertical to that part of the great South-Sea lying 124 degrees and 6 min. West from *London*, under 2 deg. 53 min. of South latitude; whence it appears, that this Eclipse will be visible in all parts of North and South *America*, and unto all the *West-India* islands.

The second, is an Eclipse of the *Sun*, upon *Friday* the 12th of *April*; the beginning of which will be visible in *England*, if the air prove clear; but the middle or greatest obscuration will not, by reason of the *Sun* setting with us, before that time. In North *America* the whole Eclipse will be visible; and to the Northern parts thereof it will be a great Eclipse, but no where total, for along the track of central appearance, the *Moon*'s ambit will be encompassed with a splendid ring of light.

At *London*, the *Moon* will make the first impression on the solar disk, and the Eclipse will be observed to begin to the right-hand of the *Sun*'s lower limb, at 13 min. past 6 o'clock, according to apparent time. And the *Sun* sets at 49 min. after 6, and will be 4 digits and more eclipsed.—*N.B.* The farther North, the *Sun* will set later; therefore, the quantity of obscuration at the time of the *Sun*'s setting, will be different at different places; yet, nevertheless, the annexed type, which is adapted for *London*, will very well serve the whole kingdom. This Eclipse is the return of that famous solar one that happened on the 1st of *April*, 1764, according to the *Chaldean* Sares of 18 years, &c.

Note, *b*. represents the point on the *Sun's* limb, where the Eclipse is expected to begin.

The third, is a partial Eclipse of the *Moon*, upon *Saturday* the 21st of *September*, and with respect to *London*, our metropolis, the Eclipse begins at 20 min. past 1 in the afternoon, and will be quite over at 28 min. past 3, which is long before the *Moon* rises in any part of these kingdoms. But at the time of the greatest obscuration (which is at 24 min. past 2) the *Moon* will be vertical in latitude 1 deg. 12 min. South; 144 deg. 25 min. East from *London*; consequently this Eclipse will be visible to most of the small isles dispersed in the great Pacific Ocean, *New Zealand*, *Van Diemen's Land*, *New Holland*, the isles of *Sunda*, *Borneo*, *New Britain*, the *Philippines*, *Japan*, *Yedzo*, and the whole continent of *Asia*. The defect is but small, being only near 4 digits, on the *Moon's* upper limb.

The fourth and last, is a solar defect; upon *Monday* the 7th of *October*, about our 1 o'clock in the morning, therefore invisible, not to us only, but even to all *Europe*. But in the great South-Sea it will be a very great Eclipse; for in about 49 deg. and a half of South latitude, and 153 deg. of East longit. from *London*, viz. between *Van Diemen's Land*, and *New Zealand*, the inhabitants, if any such there be, will behold the *Sun* centrally and totally eclipsed on the meridian, that is noon-day; which sight will doubtless be very terrible to them (if unskilled in *astronomy*) especially if they have a serene sky; for though the darkness comes gradually on until the first gloomy moment, yet so piercing is the least thread of the *Sun's* light, that the momentary transition, from clear sunshine to gloomy darkness, will give a great shock to nature, even in such persons as expect it; and much more so, when it comes upon them at unawares, or by surprize.

ASTRONOMICAL REMARKS,

Communicated by Mr. ANDREWS.

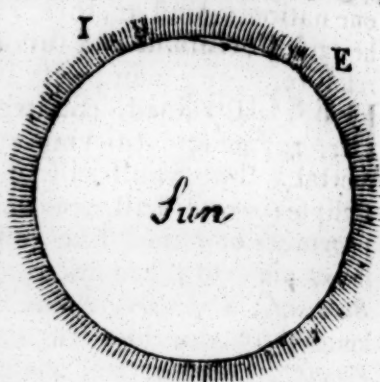

BESIDES these Eclipses, there will happen this year, on *Tuesday* the 12th of *November*, a small transit of *Mercury*; that planet will (if our calculations and tables are right) pass over the upper limb of the *Sun*, from East to West, in form of a round black spot, and will be seen, if the weather be clear at the time, to all places of the earth where the *Sun* is up; and is a phenomenon that no mortal eye ever beheld before the year 1639. *Mercury* being but small in diameter, some sort of telescope must be used in observing of him traverse the *Sun's* face; and the precaution of interposing a dark glass between the eye and the telescope, is absolutely necessary to be taken, without which the sight may be hurt and greatly impaired; but, thus shielded, it will be perfectly secure from danger, or any inconvenience. *Mercury's* center enters the *Sun's* disk a little to the left of his zenith (at *London*) at 51 min. past 2 o'clock in the afternoon; the middle of the transit will be at 33 min. past 3; *Mercury's* center passes off the *Sun's* disk again towards the right-hand at 15 min. past 4; according to apparent or solar time. The duration of this transit will be 1 hour and 24 min. *Note*, according as places are situated either to the East or West of the meridian of *London*, in time, just so much later or sooner will the times of the transit happen at those places, to what it does at *London*; for at *York* it will be 4 min. and at *Edinburgh* 13 min. sooner. At *London* the sun sets (that evening) at 28 min. after 4; at *York* at 18 $\frac{1}{2}$ min. past 4; and at *Edinburgh* at 10 min. past 4. — N.B. These numbers are the result of a calculation, in which the *Sun's* place was computed by Mr. *Mayer's* tables, and that of *Mercury*, from the tables of Mr. *Wargentin*, annexed to M. *De La Lande's* astronomy; as, I presume, they will best agree with observation. *Mercury's* diameter is 2980 miles; and his distance from the *Sun* 36,281,700 Miles; and his size almost 7 times less than the *earth*.

The annexed type, which is adapted to the city of *London*, will be sufficient to inform the curious observer, in what part of the *Sun's* periphery he may expect the points of immersion and emersion, and will tolerable serve for the three kingdoms.

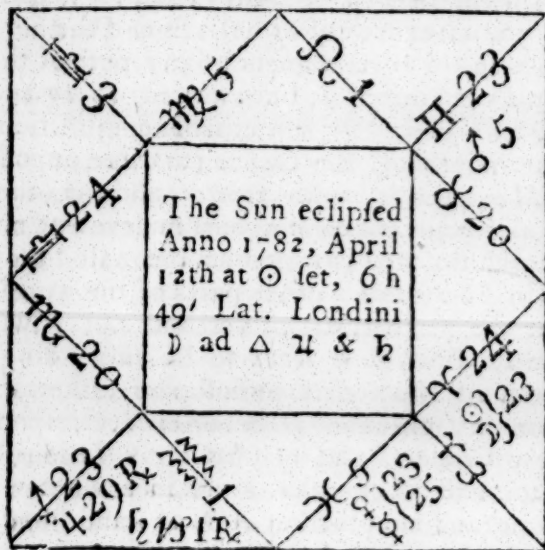

Type

Type of the Tranfit of *Mercury*.

Note, The ecliptic varying its position, in respect to the vertical circle, will make the tranfit appear to be performed in a curve line, and that concave towards the *Sun's* center, if I mistake not. I ♄, the point on the *Sun's* limb, where the imm. is expected to begin; and ♄ E, the point on the *Sun's* limb, where the emer. takes place, and *Mercury* passes off the *Sun*.

It always has been the opinion of the most learned astrologers, that Eclipses affect those places only to which they are visible; therefore we have only the part of a solar Eclipse, that is visible to us here in *England*, the *Sun* setting before the time of the greatest obscuration: Hence the following scheme is only adapted to the time that the *Sun* sets at *London*, in which, you may observe that ♄ 4 deg. of \cap ascend, and the 1st degree of Ω culminates; the eclipsed luminary is positioned in the 23d degree of (γ) *Aries*, *England's* ascendant.

Proclus tells us, that when Sol is eclipsed in the last decanate or face of γ , it bringeth the grief and sadness to mortals, and the death of great women, and a scarcity or diminution of cattle, namely those of the lesser sort, because signified by γ , such as sheep, &c. the Lord of this Eclipse is δ , who, according to *Origanus*, threatens, that the

fruits of the earth shall be consumed by fire, heat, and dryness of the air, extorted by violence, or consumed by soldiery; he threatens sickness by heat and dryness, war and bloodshed,

rapine and extortion; he sets *Europe* together by the ears, one nation against another, and kingdoms against themselves; he raiseth seditions and tumults, kings are mad, and subjects resolute, young men perish by the sword, cities are consumed by fire, and ruined, countries are spoiled by injuries, murder, rapine and thieving, the air is hot, pestilential and mortal. This you'll observe is a general judgment of this Eclipse; and I shall now mention some of the kingdoms, provinces or cities, like to be passive with respect to its effects, and they are these, viz. *England, France, Germany, Burgundy, Denmark, Syria, Palestine*, and the *American Colonies*; some of the cities are *Naples, Capua, Florence, Lisbon, Vienna in Austria, and Antwerp, &c.*

Having done with this Eclipse, I shall now give you some account of the grand conjunction of *Saturn* and *Jupiter*, which happens in 28 deg. 23 min. of ♄, on the 6th of *November*, about noon; the latitude of *Saturn* being 47'; and that of *Jupiter* 3', both North; hence *Saturn* is elevated above *Jupiter* 44 min. This conjunction, tho' never repeated by a retrograde application, is, notwithstanding by those accidents (if they may be so call'd) very much prolonged; for from the beginning of this year to *February* 1783, they are within orbs, or in platick conjunction, and that, for the most part in ♈, tho' sometimes in ♊; but their partile conjunction falls in ♈ (the ascendant of *Spain*) a sign of the fiery triplicity. Conjunctions of these planets in any part of the zodiack are accounted very inimical, but more so in fiery and earthly signs. And, also, preceding this notable conjunction, there happens in the month of *May* two remarkable oppositions of the planet *Mars*, the first with *Jupiter*, and the other with *Saturn*; all which aspects are of a very malevolent nature, and very remarkable accidents and actions will follow in many kingdoms in *Europe*, and other parts of the world; but let us hope that the God of all power and mercy will divert his judgments, which now seem to be impending; for it is the opinion of the wisest philosophers, that the greatest mutations on this sublunary globe, do ever correspond with great Eclipses, Comets, and major Configurations of the superior planets; and to mention a few, see what was concomitant to that grand conjunction of *Saturn* and *Jupiter* in 1742, and the two splendid Comets that attended it, most ominous signs of approaching trouble and calamity, scarce a nation was free from war, trouble, or other dire calamity in *Europe*. Our causeless rebellion broke out on a conjunction of

h and f in m , and that dreadful distemper appeared amongst the horned cattle, in *Holland* and *Denmark*, under their conjunction in m 1745; it communicated itself into *England*, and raged with great and dreadful havock through most of the counties in the nation; and these evils appeared under their malifick configurations; so peace and happiness attend their good, for the peace in 1748, was concluded upon a Δ of *Saturn* and *Jupiter*. The rebellion or revolution in *North-America* began to ferment under the influence of an 8 of h and 4, which happened in 1773, and a \square of h and f in 1774; but broke out with fury under a conjunction of the two last mentioned planets in 1775; and to add fuel to the flame, in 1776, happened a very malevolent quartile aspect of *Saturn* and *Jupiter*; since which time, we have seen how the fire of war has catch'd, and in a dreadful manner spread itself, both into *Europe*, *Asia*, and other parts of the world. But of all the plagues and judgments that God is pleased to inflict on mankind, that of earthquakes and hurricanes are the most tremendous. A late instance of which, is that most dreadful hurricane and earthquake that happened the 10th of *October*, 1780, at *Barbadoes*, and other of the *Leeward Islands*, where most of the houses and trees were thrown down, and some thousands of lives lost, together with much shipping, &c. and this on a \square of *Saturn* and *Mars* in f and m . The last most terrible hurricane we have on record, that has happened this century in the *West-Indies*, was at *Port-Royal*, in *Jamaica*, in 1722, upon a conjunction of *Saturn* and *Jupiter* in f . — A 1000 acres of land were suddenly sunk at *Savannah*, in *Jamaica*, with the houses and people in them: The place appeared for some time as a lake, but was afterwards dried up, and no trace of houses seen, and this upon an 8 of h and 4 in f and II , 1692. In this last calamitous hurricane, which happened in 1780, it was first felt at *Jamaica* on the 3d of *October*, at *Barbadoes* on the 10th, and something of it was noticed in *England* on the 15th of the same month; and noticed only, did I say? yes, for with what mildness did arrive on the *British* shore, that little or no damage was done by it in this our land; yet, let us not presume to say with the psalmist, *This we had, because we have kept his precepts and commandments*. No, let it not make us in the least bold and daring, but rather raise us up to a grateful and humble acknowledgment, with one heart and voice, for this favourable allowance, that we might hence bring forth works meet for repentance; and be thankful for the

the mercies of a gracious God bestowed upon us, and let us pray that he will still preserve us from our surrounding enemies, and in our day command peace upon earth; *For if the Lord of hosts hath purposed, who shall disannul it? and if his hand it still stretched out, who shall turn it back?* Isaiah xiv. ch. v. 26 and 27. After this digression, I shall present my courteous readers with a remarkable HIEROGLYPHIC alluding to these wonderful times.

Now, I will give you one of *Nostradamus's* prophecies, which is now fulfilling. It is the 5th in the 4th century; and runs thus in the French language.

Croix paix, soubz un accomply divin verbe ;
L'Espagne & Gaules seront unis ensemble ;
 Grand clade proche, & combat trefacerbe ;
 Cœur si hardy ne sera qui ne tremble.

In English, thus :

The cross shall have peace, under an accomplish'd divine word;
Spain and *France* shall be united together ;
 A great battle near hand, and a most sharp fight ;
 No heart so stout but shall tremble.

ANNO-

A N N O T A T I O N S.

By *divine word*, we must not understand the second person of the Trinity, but a divine or theologian. Therefore the meaning of the first verse is, that under the government of some eminent divine, (be like a good Pope) the cross shall have peace; that is, the christian religion shall be in peace, and persecution shall cease for a time in some popish countries. The last three verses are plain.

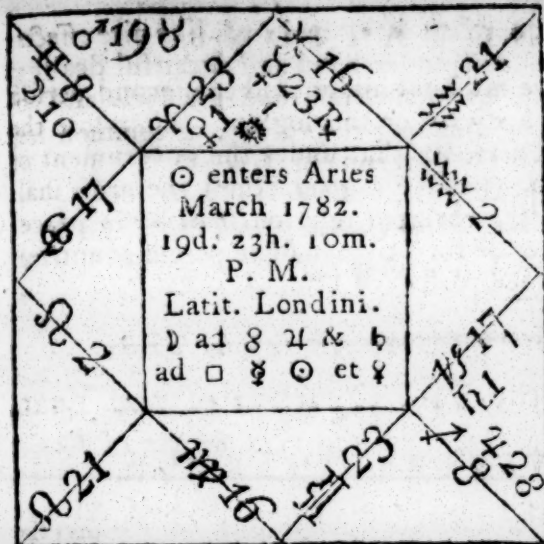

Observations of the Four Quarters of the Year.

I. Of the WINTER QUARTER.

The Winter Quarter takes its beginning on *Friday* the 21st day of *December*, at half an hour after nine in the morning, 1781; at which time 20 degrees of φ is on the Eastern horizon, and the 25th degree of μ is upon the cusp of the 10th house; where \mathcal{U} and \mathcal{S} are nearly conjoined, the \odot and \mathcal{I} are in the 11th house; but \mathcal{V} and the \mathcal{D} and \mathcal{J} are under the earth, the two first planets are in the ascendant or first house, and the latter planet in the 2d house. The *Moon* is applying to a \odot of \mathcal{S} , and an \mathcal{S} of \mathcal{U} \mathcal{S} and \mathcal{I} . Thus are the seven wanderers distributed and disposed in our celestial scheme of heaven. And therefore I judge that during this Winter quarter there will be things turn up, and that very remarkably in the affairs of Kings and Princes, &c. which will appear more effectually in the other quarters following, therefore I shall proceed to consider the Vernal or Spring Quarter.

II. Of the SPRING QUARTER.

A scheme of the grand radix of the year's revolution, or Sol's ingress into *Aries*, followeth; which commences on *Wednesday* the 20th day of *March*, at 10 min. past 11 o'clock in the forenoon, when 16 degrees of *Pisces* culminate, and 17 degrees of *Cancer* ascend. The *Moon*, and the rest of the planets appear as in the figure, or scheme. Here you will observe that all the planets are above the *Earth*, except \mathcal{I} and \mathcal{U} ; whence there is an indication, that affairs are more open and conspicuous than heretofore; & the secret machinations,

tions, and close conspiracies of the enemies to our government, now laid more open to the world. And the active contrivers, and abettors of our present mischiefs and misfortunes, and ungrateful men, by this time we conceive may know the reward of their evil practices. The influence of the opposition of the two malevolents ♅ and ♆

are likely to shew the world, that the many and great troubles, vexations, and miseries, that several kingdoms and states in the world labour under, are not (it is to be feared) yet over; and that the influence of ♅ and ♄, whose partile conjunction is now approaching, will (if not already) shortly manifest itself; and the other malevolent configurations of the planets, seem as though they would usher it in with a vengeance. All *Europe* in arms, both earth and sea disquieted and enraged, and so are the minds of men. May the Almighty God bless and preserve the *English* nation, and keep us this year, and for ever in due obedience to our superiors; and whatever may be the issue and event of the grand concerns at present on foot, let us leave them for time to determine, for we know that God can further, or withhold their influences when he pleases, and for his mercies sake.

III. Of the SUMMER QUARTER.

Which begins this year on *Friday* the 21st of *June*, at 21 min. past 9 in the morning, when 2 deg. of *Virgo* ascends, and the 23d deg. of *Taurus* culminate; the positions of the planets are as follow: viz. ♅ in 28th, and ♄ 23d of ♈, and ♋; ♆ in 20 of ♎; ♀ in 16 of ♏; ☿ in 25 of ♏; and the ☉ in 6 deg. of ♏; this is like to be a very active and busy quarter; all, or most nations in the world seem deeply immersed in the calamities of the times; such as wars, commotions, seditions, insurrections, epidemical sickness, and great

mor

mortality ; tempests, earthquakes, and such like dire effects ; treasons, treacheries, and under-hand and deceitful dealings practised among men, and sometimes under a shew and colour of religion, not only among the vulgar, or common sort of people, but against the government also.

The better we our fleeting time do spend,

The fitter we to make a pious end.

IV. *Of the AUTUMNAL QUARTER,*

Which enters on *Sunday* the 22d day of *September*, at 59 minutes past 10 at night, when the 15th degree of *Cancer* ascends, and 13 deg. of \mathfrak{H} is on the mid-heaven ; the planets places are as follows : \mathfrak{h} in 25 and \mathfrak{U} in 21 deg. of \mathfrak{f} ; \mathfrak{d} in 20 and \mathfrak{q} in 4 deg. of \mathfrak{m} ; \mathfrak{g} in 13 deg. of \mathfrak{c} ; and all under the earth, except the \mathfrak{D} , which is in 15 deg. of \mathfrak{V} , on the cusp of the 11th house. — The great number of important mutual aspects that happen near this ingress, as will appear by looking into the month of *September*, are very remarkable, and of imminent importance. Here's notable transactions signified, and many great affairs are now acted, and acting on the theatre of the world ; grievances and oppressions are the complaints of many countries and colonies, under the fiery and earthly trigons. — Having thus given you a brief account of the *Sun's* ingresses into the cardinal points, I shall desist, and come to a conclusion, and refer you to the observations I have made in every month, for more particular information.
